PROJECTS

AI Powered Water Sprinkler System

- Integrated **ESP32 microcontroller** with DHT22, soil moisture, and temperature(DH18B20)sensors.
- Processed real-time sensor data via **MQTT and Node-RED** dashboard.
- Deployed a **lightweight AI model to predict optimal water sprinkling time**, enhancing resource efficiency.

Classification of Diseases

- Built and evaluated a **machine learning model using deep learning (TensorFlow/Keras)** for classifying HIV-related activity
- Achieved 94.26% accuracy and used precision and recall metrics for validation
- Demonstrated the use of structured feature input and a complete **training-to-prediction pipeline**

Handwritten Equation Solver

- Developed a **ResNet-based CNN** to identify handwritten mathematical symbols from segmented images.
- Used, image preprocessing, and contour segmentation.
- Combined model predictions using a **rule-based parser** to evaluate full equations using **Sympy**.
